

National BIM Standard - United States® Version 3

Annex B

United States National Building Information Modeling Standard™ Version 1 – Part 1: Overview, Principles, and Methodologies December 2007

B.1 Introduction

The United States National Building Information Modeling Standard™ Version 1 – Part 1: Overview, Principles, and Methodologies (NBIMS) was released in December 2007 to an industry with a lot of questions about BIM. There was never an NBIMS Version 1 Part 2. Under its new name NBIMS-US™ Version 3, as well as Version 2, build on the original document. NBIMS Version 1 Part 1 contained many forward looking statements, predictions of the future, and references to groups and items that simply do not exist. Appendix C - IFD Library™ from NBIMS V1 P 1 was balloted and updated through the NBIMS-US™ V2 consensus process while the other chapters were not.

The NBIMS-US V2 Planning Committee made the decision that NBIMS V1P1 would be made a part of NBIMS-US™ as an Annex. The revised and approved 2007 NBIMS Appendix C has now been incorporated in the Reference Standards section of the current version of the standard.
